

# Building a Website No Coding Required!

**Alan German**

Ottawa PC Users' Group

**March 13, 2024**

# Why build a website?

- Share information with specific friends – or the entire world!
- Showcase your interests
- Promote a business/sell on-line
- Blog about your favourite topic
- Publicize events for an organization or an individual
- Develop your computing skills
- Other...

# Why build a website?

- Share information with specific friends – or the entire world!
- Create an online presence
- Increase visibility
- Build a brand
- Increase sales
- Showcase skills/talents
- Develop IT skills
- Other...

We will develop a website to share digital photographs

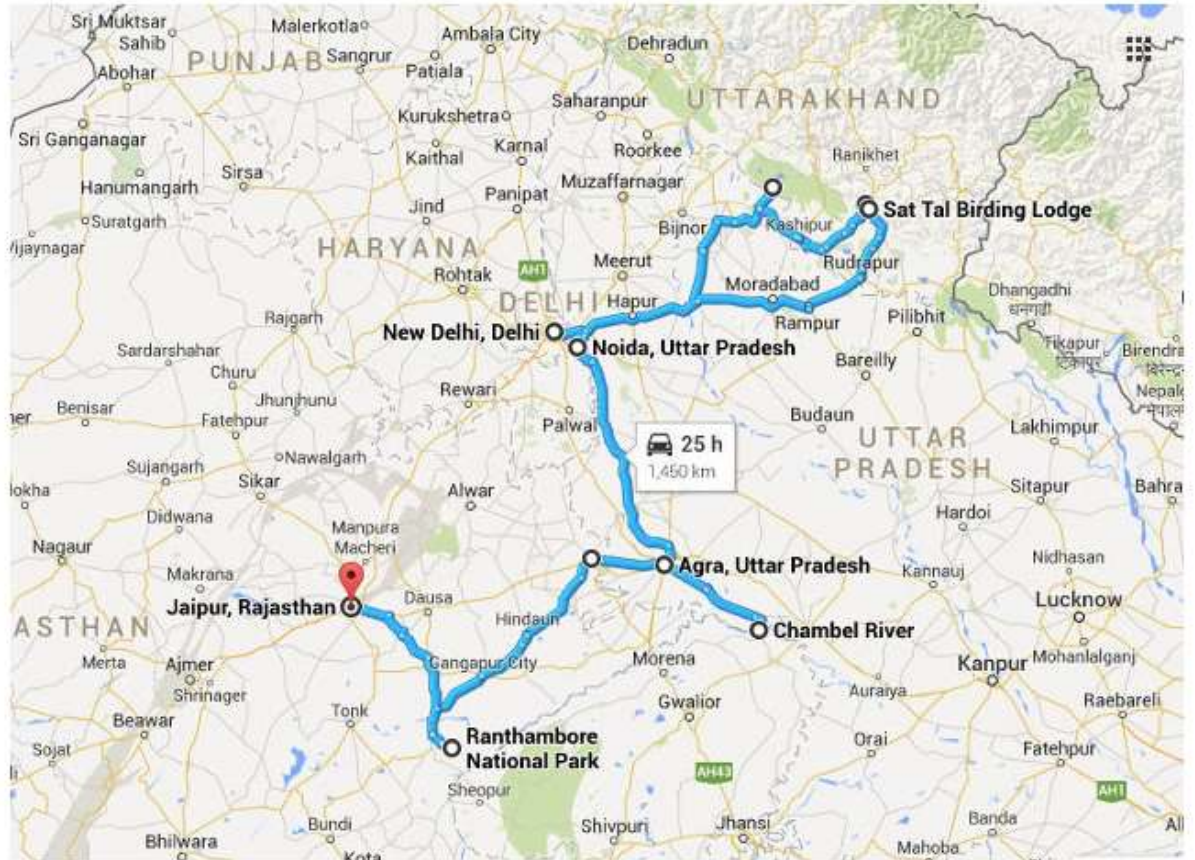

# But first, some examples...

## Birding India Jan-Feb, 2015

The northern leg started in Delhi, went up to Pangot in the foothills of the Himalayas, and ended in Jaipur where we flew south to Cochin

We saw three tigers...

The first tiger exploded from tall grass while we were on an elephant safari in Jim Corbett National park - it happened much too quickly for any photographs

However, the second tiger was much more stationary

But then, in Nagarhole National Park, at the edge of a river, we found a tiger that had killed a Gaur ("Indian Bison" - the the largest wild bovine in India) . We think he looks kind of smug about the whole business!

Application of Multiple Rib Gages to Improve Chest Injury Measurements; Digges K, Dalmotas D and Prasad P; Paper No. 19-0266; Proc. 26th ESV Conf.; Eindhoven, Netherlands; June 10-13, 2019

[Download the full-text article as a PDF file \(1.2 MB\)](#)

**Abstract:** In 2011 the National Highway Traffic Safety Administration (NHTSA) made changes to the new car assessment program (NCAP) frontal full-width test rating that introduced a chest deflection metric. The dummy seating protocol did not specify routing procedures that consistently control shoulder belt positioning on the dummy. Thus, most NCAP tests were conducted with the D-ring in the full up position, placing the shoulder belt far above the center chest potentiometer, thereby loading the dummy's chest asymmetrically.

Previous research showed that differences in chest deflection measurement caused by variations in belt routing are not trivial, and correspond to a risk of serious chest injury, especially for older females. The objective of the present study is to investigate the use of supplementary chest deformation sensors, such as RibEye and IR-TRACCs for identifying belt fitment procedures which provide accurate chest readings by ensuring that the shoulder belt is routed near the dummy's center chest gage.

Figure 7. Belt Routing 50th Male Dummy D-ring Down (Left) and D-ring Up (Right)

## Hot off the Press!

**Dainius Dalmotas, Aline Chouinard, Jean-Louis Comeau, Alan German, Glenn Robbins and Priya Prasad; Examination of Crash Injury Risk as a Function of Occupant Demographics; Stapp Car Crash Journal; Vol. 67; 2024**

**Abstract:** The objectives of this study were to provide insights on how injury risk is influenced by occupant demographics such as sex, age, and size; and to quantify differences within the context of commonly-occurring real-world crashes. The analyses were confined to either single-event collisions or collisions that were judged to be well-defined based on the absence of any significant secondary impacts. These analyses, including both logistic regression and descriptive statistics, were conducted using the Crash Investigation Sampling System for calendar years 2017 to 2021.

## Deploying a Qt 6 Program in Linux and Windows

Posted on [February 10, 2024](#) by [Alan German](#)

Developing a C++ program with a graphical user interface can readily be achieved using the Qt Creator integrated development environment. In addition Qt Creator is cross-platform and is available for both Linux and Windows. However, once an application has been built on a given computer, deploying the software to another machine, even one running the same operating system, is not necessarily straightforward. Essentially this is because Qt Creator produces dynamically-linked software so the resulting executable file must be accompanied by a suite of dynamic-link library (DLL) files in order to be able to run.

### Deploying a Linux executable

We start with the release version of an application built using Qt Creator. For Linux, this provides an executable file with the name of the application. As an example, we are going to use an app named UpdateContacts, that is designed to consolidate the address books (personal and collected addresses) for the Thunderbird E-mail client. If we now copy this file to another Linux system and run (double click) the program, nothing will happen. If

## Restoring the Home desktop icon in Mint 21.1

Posted on [December 7, 2022](#) by [Alan German](#)

The next release of Linux Mint, Version 21.1 (Vera) will be generally available later this month. In the interim there is a beta version available or testing. One of the changes in the new distro is that the icons for “Computer” and “Home” have been removed from the desktop.

## Installing Notepad++ in Linux Mint

Posted on [December 3, 2022](#) by [Alan German](#)

I recently came across an article discussing free and open-source Linux replacements for the Windows text editor, Notepad++. I have been using Notepad++ when dual-booted into Windows as I find its ability to open multiple files in separate tabs to be extremely useful. My fallback in Linux has been to use Notepadqq which is essentially a Notepad++ clone. While the article included this package as one option, it also indicated that Notepad++ itself could be installed in Linux using snap and Wine.

## PORTRAITS

Through my travels, I've shot portraits all over the world. In my photos, I work to capture real moments and honest emotions. I search for subjects with unique facial features.

Shot in both color and black and white, these images function as a window into understanding not only the subject, but ourselves.

# UGANDA

During our trip to Uganda we saw many bird species  
but also had the great fortune to view a troupe of  
Mountain Gorillas

# Pros and Cons

- Google Sites is readily available for anyone with a Google (Gmail) account
- Free web hosting!
- It is easy to use with a short learning curve
- No HTML coding required
- It is somewhat restrictive in the placement of text and images on the page
- Limitations on the web site address  
(URL will include *sites.google.com*)

# Finally...

[alan.german@opcug.ca](mailto:alan.german@opcug.ca)

**Building a Website - No Coding Required!**
