

Q&A

~~Alan German~~ **MIA** & Chris Taylor  
Ottawa PC Users' Group

*May 20, 2026*

# SDR dongle

- How best to get started in using an SDR (software-defined radio) dongle to act as a receiver
- Through the computer or cell phone to listen to the RF spectrum?

Share

# New Microsoft PowerToy!

Share

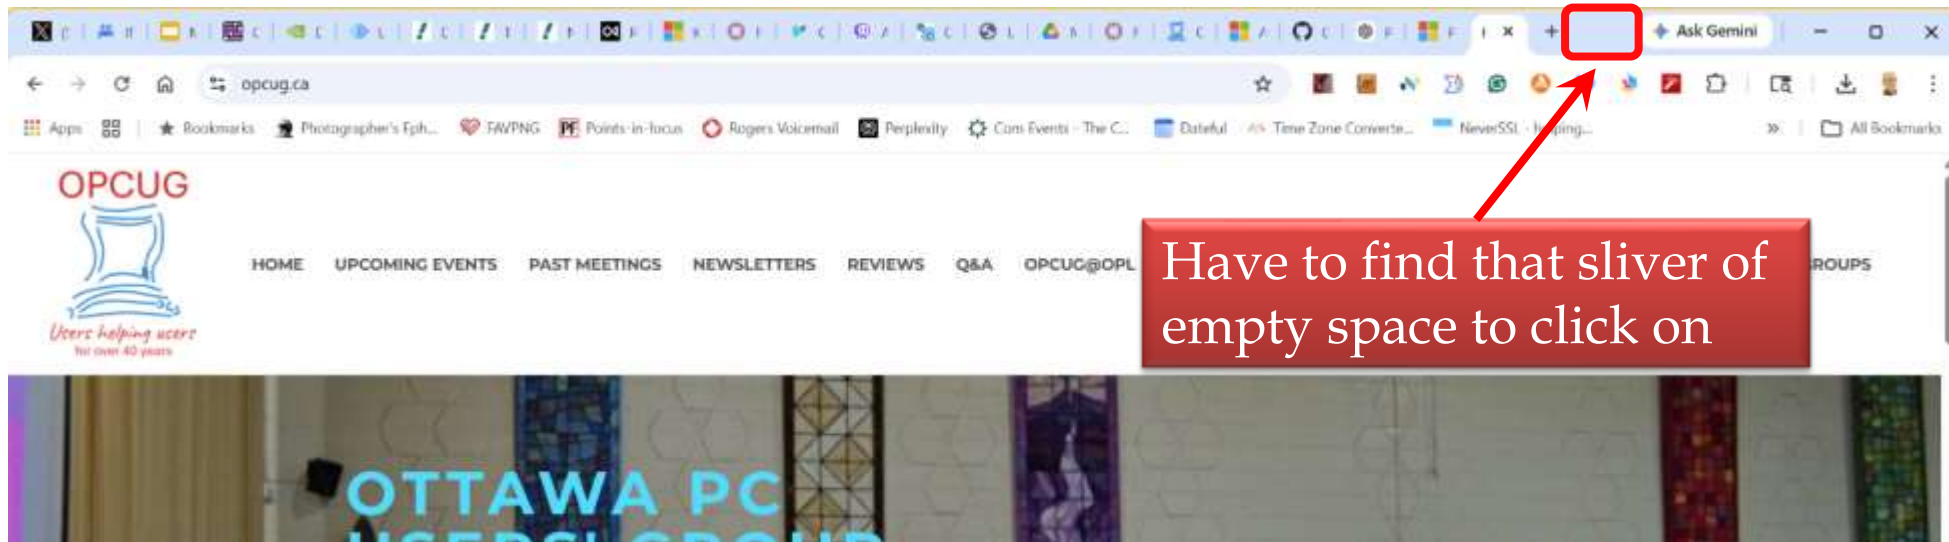

# Microsoft PowerToys

- Everyone knows by now...
- I am a huge fan of Microsoft PowerToys
  - collection of 32 utilities
  - *super-charge* many aspects of using your computer
  - almost daily basis I use:
    - Advanced Paste, Fancy Zones, Image resizer, Keyboard Manager, and Quick Accent
  - on a weekly basis, I use many more
- Install the entire collection
  - Microsoft Store: search for Microsoft PowerToys
  - Github: <https://aka.ms/installPowerToys>
  - Winget from a Command prompt or PowerShell
    - to install for current user
      - `winget install --id Microsoft.PowerToys --source winget`
    - to install for all users
      - `winget install --id Microsoft.PowerToys --source winget --scope machine`

Share

# Normal window move

- To move a window
  - click and hold on the *title bar* of the window
  - drag the window to a new location
  - release the mouse button
- But what about when a title bar is cluttered?

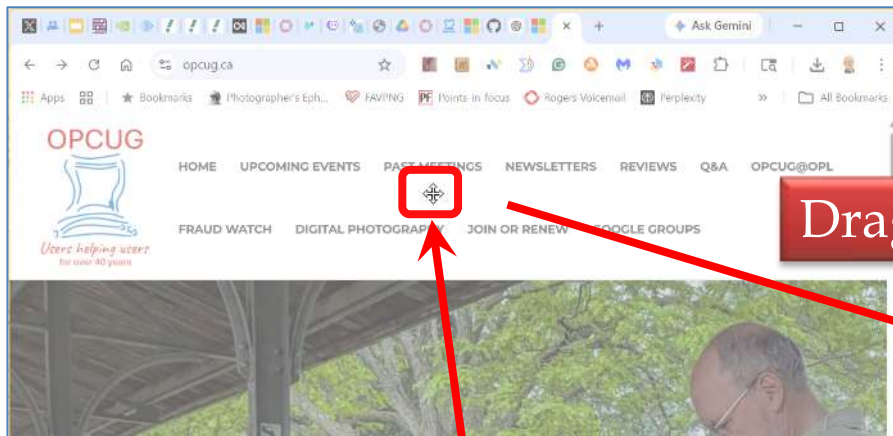

Share

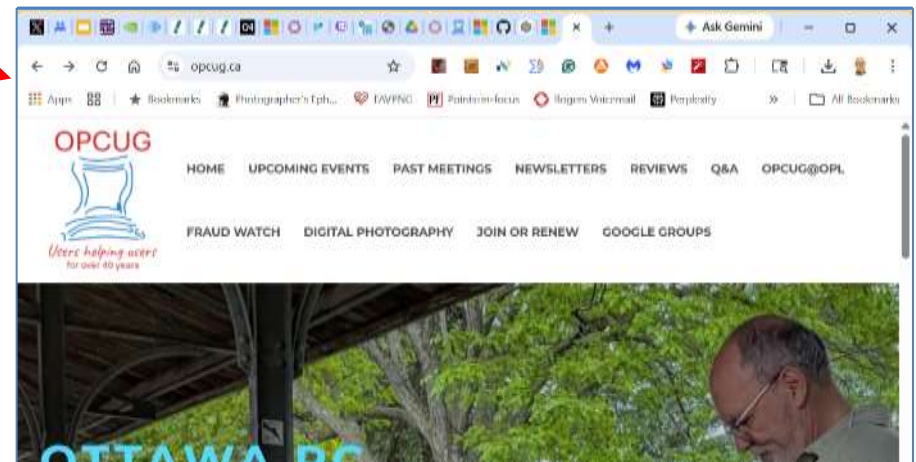

# Grab And Move

- Activated when you hold down the Alt key

Drag window

Release mouse button

Hold down **Alt** key  
Click & hold mouse *anywhere* in window

- window dims
- mouse pointer shows 4-headed arrow

Share

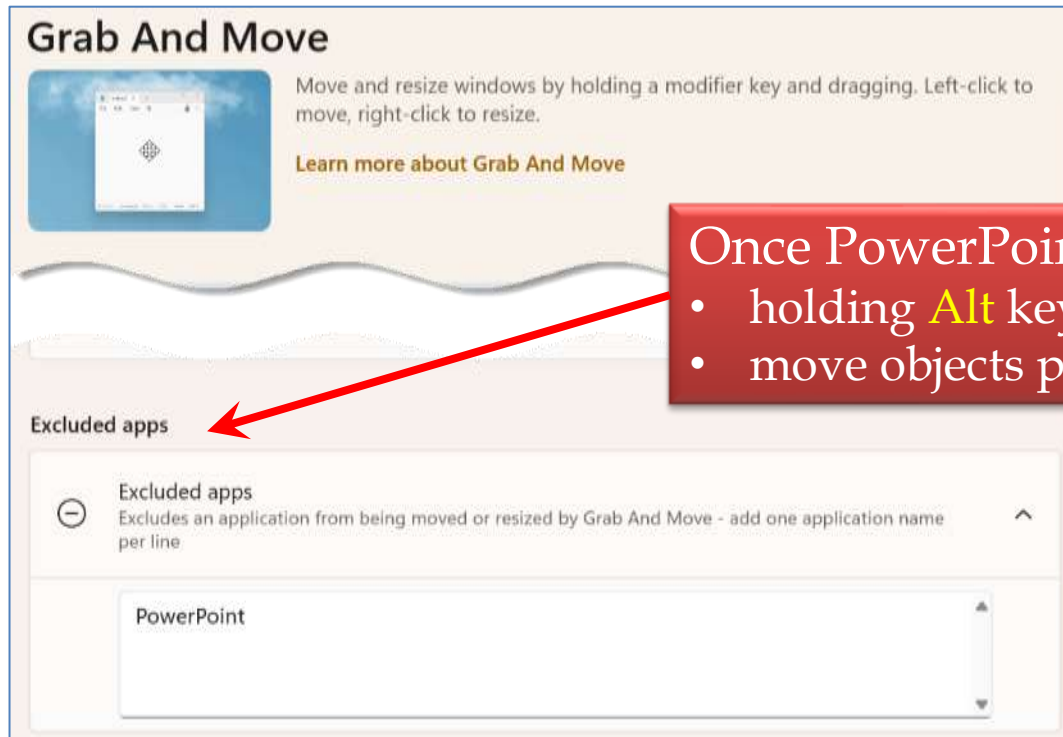

# Fly in the ointment...

- In PowerPoint
  - when dragging objects, movements jump in large increments
- Holding down the Alt key
  - allows very fine pixel-by-pixel adjustments in position
- Grab And Move
  - overrides PowerPoint's use of Alt key
    - thinks you want to move the window
  - can start the dragging of object & then hold the Alt key
    - doesn't try to move the window
    - but still moves in large increments (not pixel-by-pixel)

Share

# Fortunately...

- Setting in Grab And Move
- *Excluded apps*
  - programs where Grab And Move should be disabled

Once PowerPoint added

- holding **Alt** key in PowerPoint
- move objects pixel-by-pixel

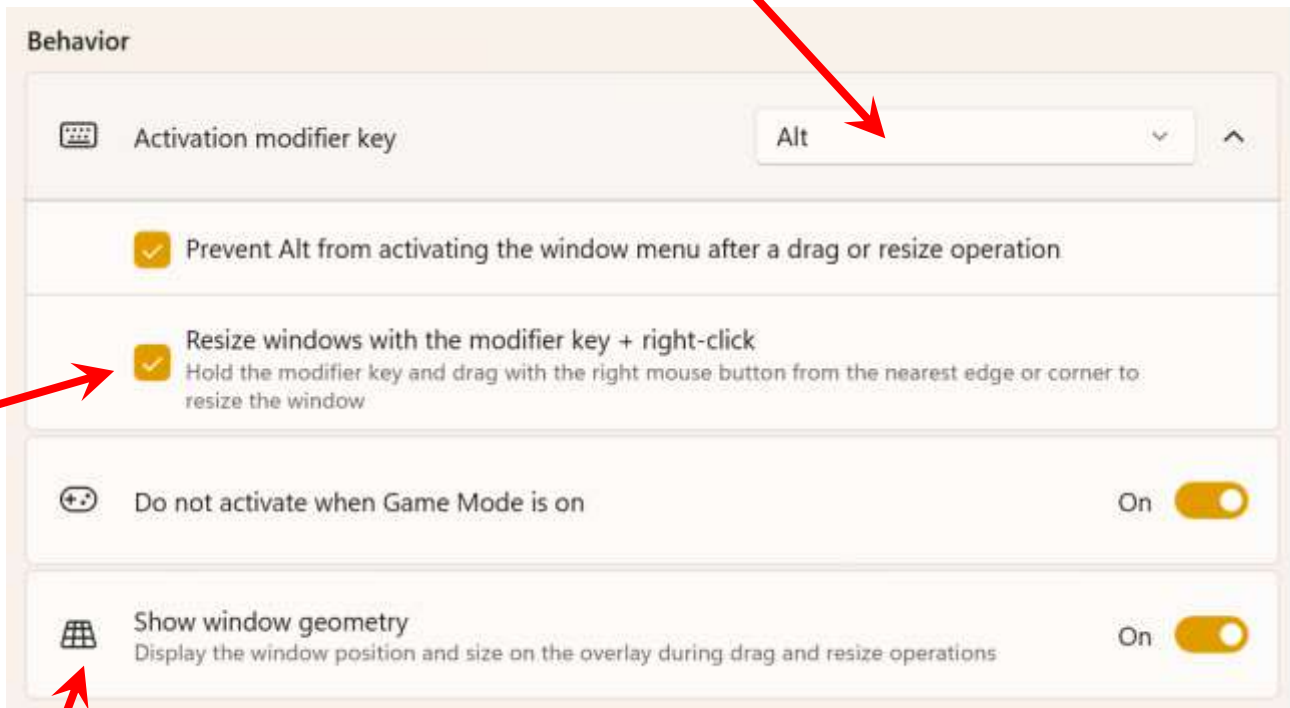

Share

# Other customizations

Choose **Alt** or **Windows** key to activate

*Really* nice

- rather than trying to catch the edge of a window to resize it

Shows small box at center of window being moved

- window's top-left corner position in pixels from top-left of screen
- size of the window in pixels

Share

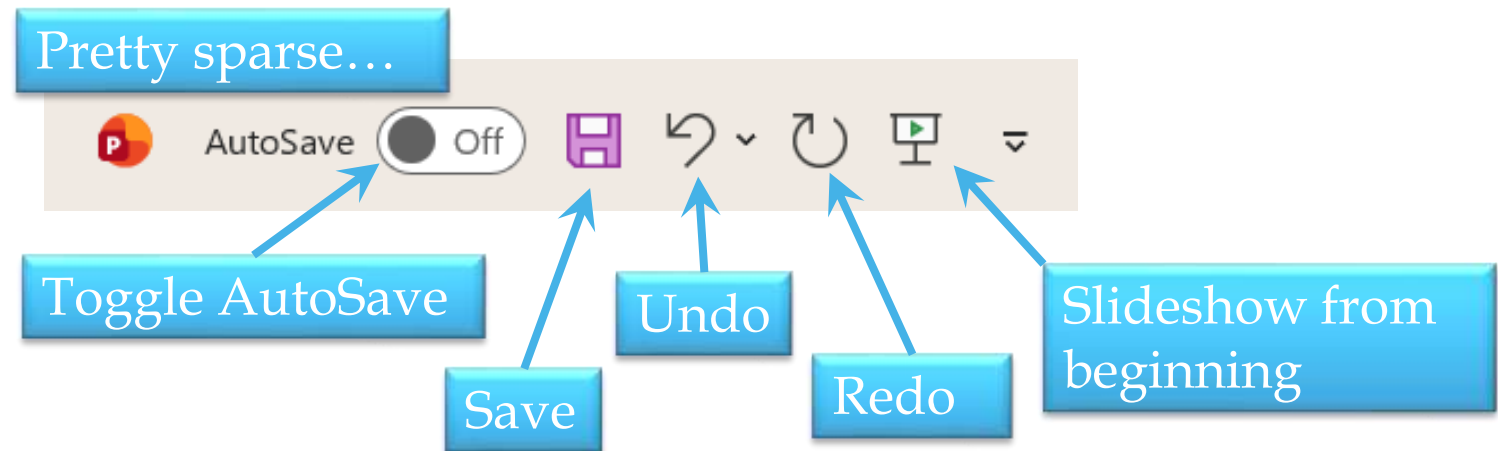

# Quick Access toolbar in Microsoft Office programs

- Lots of operations take multiple clicks of the mouse ...and you may have to hunt for them!
  - which tab is it?
  - which section is it?
  - which icon is it?
- Examples:
  - Word: spell check
    - Review tab > Proofing section > Spelling & Grammar
  - Excel: freeze panes
    - View tab > Window section > Freeze Panes
  - PowerPoint: bring object to front
    - Shape/Picture Format tab > Arrange section > Bring forward dropdown > Bring to Front

Share

# Faster access to commands

- For frequently used commands wouldn't it be nice to have single-click access?
- **Quick Access** toolbar in top-left of window

- Don't see Quick Access Ribbon?
  - right-click on ribbon > **Show Quick Access Toolbar**, or
  - **File** tab > **Options** > **Quick Access Toolbar** > **Show Quick Access Toolbar**

Share

# Customize Quick Access Toolbar

Click chevron at right end of Quick Access Toolbar

Can toggle existing entries

What about other commands?  
• click More Commands...

Customize Quick Access Toolbar

- Automatically Save
- New
- Open
- Save
- Email
- Quick Print
- Print Preview and Print
- Spelling
- Undo
- Redo
- Start From Beginning
- Touch/Mouse Mode
- More Commands...
- Show Below the Ribbon
- Hide Quick Access Toolbar

Share

# Customize Quick Access Toolbar

Can choose from a wide range of subsets of commands

- defaults to **Popular Commands**

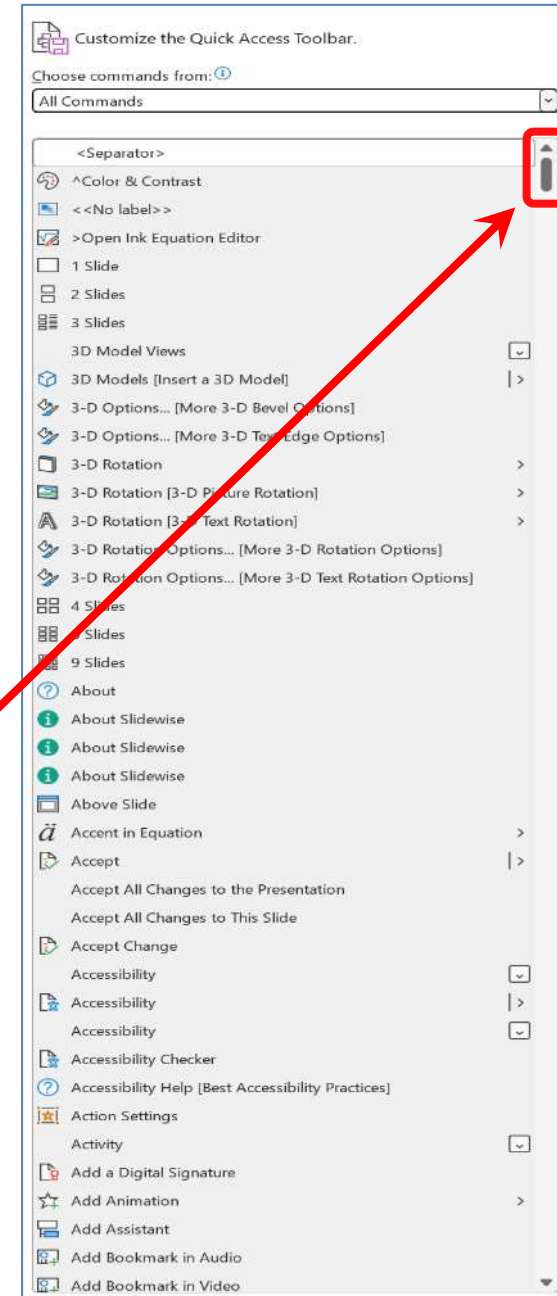

Long list of **Popular Commands**

- note length of scroll box

Or choose **All commands**

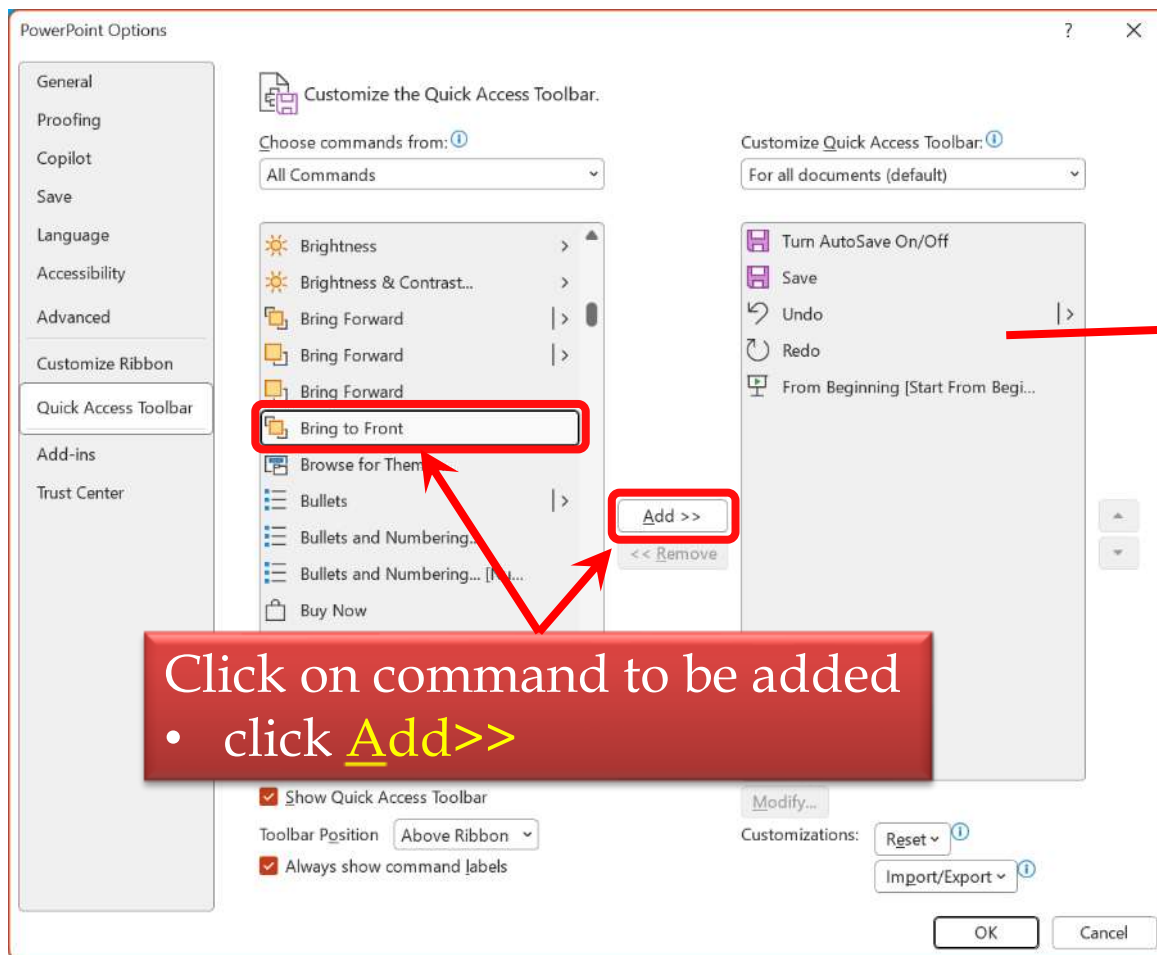

Every command in PowerPoint

- note length of scroll box

Share

# Customize Quick Access Toolbar

Click on command to be added

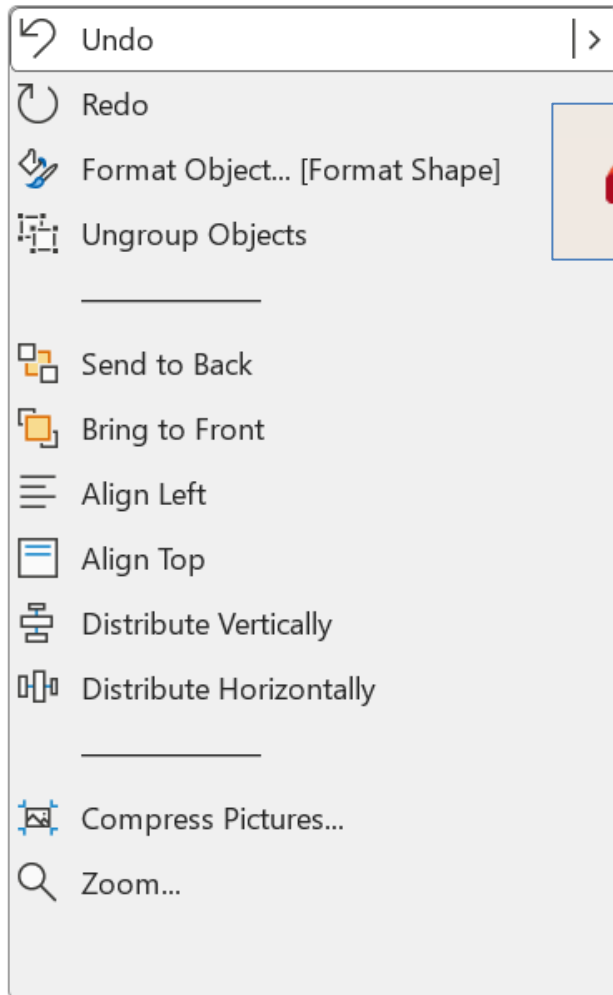

- click **Add >>**

Can

- re-order items
- remove items not needed
- add separators
- reset to default
- import/export
  - useful for saving or transferring to another computer

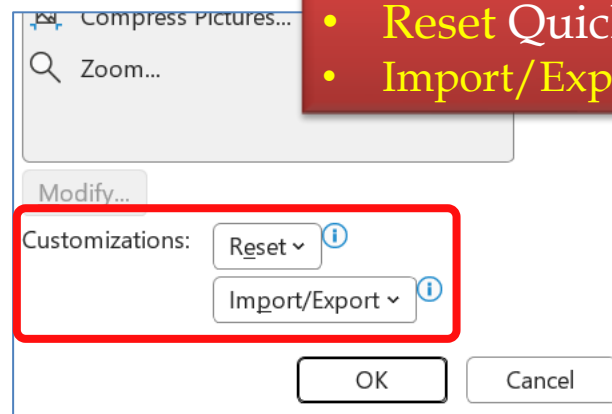

Share

# My Quick Access toolbar in PowerPoint

Bottom of **More Commands** dialogue box

- **Reset** Quick Access toolbar to default
- **Import/Export** Quick Access toolbar

Note:

- each program (Word, Excel, PowerPoint)
  - customized separately
  - imported/exported separately

# Laptop Auto On / Off

France Picard's laptop is a Dell Latitude 5511:  
Windows 11 Pro, Intel i7, WD NVMe SSD 1TB, 32GB DDR4 RAM

The laptop's day-to-day use is for personal file management.

- Microsoft OneDrive is utilized to synchronize and share files
- Backup4all is used for Sunday full backup and Mon-Sat differential backups
- Macrium Reflect "split image" is created on Wednesday evening  
(split image 4GB file chunks improve upload efficiency to the cloud)

Backup4all and Macrium Reflect files are synchronized onto Google Drive.

Client requirements:

- Reminder at 11:00 pm that computer will shutdown at 11:45 PM
- Automatically turn off the laptop at 11:45 pm
- Automatically turn on the laptop at 9:00 am

Share

# Laptop Auto On / Off

Background:

Windows hibernation is not the same as sleep, though both resume your work. Sleep keeps open apps in RAM using battery low power for quick wake-up.

Hibernate is ideal for long periods, saving any open work to ***hiberfil.sys*** on the hard drive and powering off completely to use zero battery.

We will use the Hibernate option to facilitate auto off and conserve battery.  
(Hiberfil.sys size is based upon RAM size and can be adjusted accordingly.)

Hibernate must be enabled to perform the auto turn off.

The command **powercfg /h on** enables the hibernation feature and creates the hiberfil.sys file.

At 11:00 pm, the client receives an alert the computer will shutdown at 11:45 pm. The alert reminds the client to close all open apps and work files.

Share

# Laptop Auto On / Off

France uses a riser stand with the laptop lid closed on the middle shelf. Keyboard and mouse are on the desk.

Manually extracting and opening the laptop to turn it on / off can cause the cables to loosen and disconnect.

Hence the requirement for auto turn on / off.

Share

# Laptop Auto On / Off

Use command **powercfg /a** (Available Sleep States) to confirm Hibernation is available.

```
Administrator: Command Prompt
Microsoft Windows [Version 10.0.26200.8246]
(c) Microsoft Corporation. All rights reserved.
C:\Windows\System32>powercfg /a
The following sleep states are available on this system:
  Standby (S3)
  Hibernate
  Hybrid Sleep

The following sleep states are not available on this system:
  Standby (S1)
    The system firmware does not support this standby state.

  Standby (S2)
    The system firmware does not support this standby state.

  Standby (S0 Low Power Idle)
    The system firmware does not support this standby state.

  Fast Startup
    This action is disabled in the current system policy.
```

State	Name	Description
S0	Working	System is awake, or in "Modern Standby" Keeps the system running in a very low-power state.
S1	Standby	CPU stops, RAM refreshed. High power consumption, fast wake.
S2	Sleep	CPU powered down, RAM refreshed. Rarely used.
S3	Suspend to RAM	Deeper sleep, only RAM powered. Low power consumption.
S4	Hibernate	Volatile memory is saved to hiberfil.sys. Powered off.
S5	Soft Off	Occurs when a computer is restarted. Enters this sleep state before it is rebooted.
Hybrid Sleep		Combines the activation of a higher-power sleep state (S1 - S3) with the creation of a hibernation file.
Fast Startup		Acting as a hybrid shutdown, combining elements of shutdown and hibernation.

# Laptop Auto On / Off

## Task Scheduler

The purpose of Task Scheduler is to automate routine maintenance and repetitive tasks on a computer by executing them automatically based on specific triggers or schedules.

### Task Name: "Auto Off"

- Trigger: Daily at 11:45 pm
- Action: run command **shutdown /h** to hibernate the laptop

### Task Name: "Auto On"

- Trigger: Daily at 9:00 am
- Action: run command **shutdown.exe /r /f /t 60** to initiate a fresh restart  
(**/t 60** allows the laptop an additional minute to wake)
- Conditions: "Wake the computer to run this task" to register a Wake Timer

Share

# Laptop Auto On / Off

## Behind the scenes ...

Hibernation is handled by a hand-off between the Windows operating system and the laptop's hardware firmware (**UEFI/BIOS**). Even when a laptop appears completely off, a small amount of power (flea power) is maintained on the motherboard to keep the **Real-Time Clock (RTC)** running.

### The Wake-Up Process:

**The OS Request:** When you create a task in **Task Scheduler** and check the box "*Wake the computer to run this task,*" Windows registers a "Wake Timer" with the power manager.

**The Hand-off:** As the system enters Hibernation (S4 state), Windows communicates this timer to the **ACPI** (Advanced Configuration and Power Interface) driver.

**Firmware Programming:** The **ACPI** driver programs the hardware's **RTC Alarm**. This tells the motherboard's firmware exactly what time it needs to send a "Power On" signal.

**The Trigger:** When the **RTC** matches the scheduled time, the hardware sends a signal to the power management controller, mimicking a press of the physical power button.

**Resuming:** The system boots, detects it was in hibernation, loads the saved state from `hiberfil.sys`, and Task Scheduler executes the pending action once the user session or system services are active.

Windows Event Log confirms the Sleep / Wake cycle

- Sleep time at 03:45 UTC is 11:45 pm EDT
- Wake time at 13:00 UTC is 09:00 am EDT

The screenshot shows a Windows Event Log entry for 'Event 1, Power-Troubleshooter'. The event is categorized as 'Information' and is titled 'The system has returned from a low power state.' The event details include the sleep and wake times in UTC, the log name (System), source (Power-Troubleshooter), event ID (1), level (Information), user (LOCAL SERVICE), and opcode (Info). The event was logged on 4/24/2026 at 9:00:03 AM.

Property	Value
Log Name:	System
Source:	Power-Troubleshooter
Event ID:	1
Level:	Information
User:	LOCAL SERVICE
OpCode:	Info
Logged:	4/24/2026 9:00:03 AM
Task Category:	None
Keywords:	
Computer:	Latitude-5511

UTC is Coordinated Universal Time  
(prime meridian 0° longitude)  
Divides East/West Hemisphere

Eastern Daylight Time (EDT) is  
4 hours behind UTC

# Music-Map

- You like certain musicians
- You feel in a rut and want to explore music from others
- How to find similar artists?

<https://www.music-map.com>

part of gnod, the global network of discovery

Type the name of an artist :

James Taylor

James Taylor

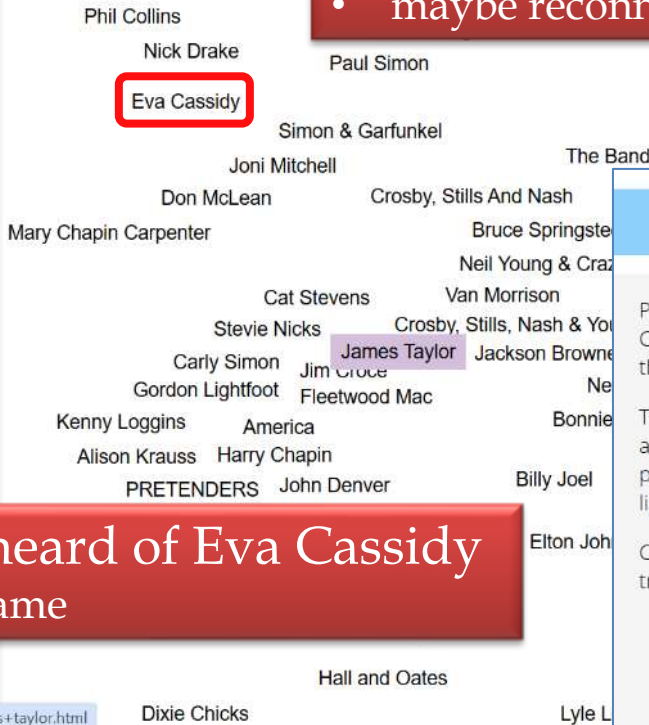

James Taylor Quartet

Start with artist you like

People who like James Taylor might also like these artists.

The closer two names are, the greater the probability people will like both artists.

Click on any name to travel along.

Eva Cassidy

Map of similar artists

- maybe reconnect with artists you know

People who like Eva Cassidy might also like these artists.

The closer two names are, the greater the probability people will like both artists.

Click on any name to travel along.

Eva Cassidy

Who is similar to Eva Cassidy?

I've never heard of Eva Cassidy

- click her name

# 3D Printing for Beginners

## From idea to finished object

- A practical introduction for new makers
- learn the printer, the materials, and the workflow
- Start simple, learn steadily, print often

---

David Swain – May 2026

# What Is 3D Printing?

- Turns a digital model into a real object
  - Builds parts layer by layer
  - Also called additive manufacturing
  - Common materials: filament, resin, nylon, and metal
- 

# Why 3D Printing Is Useful

- Replacement parts and household fixes
- Tools, shop aids, brackets, holders, knobs, clips, and adapters
- Hobby models, prototypes, education, and small business products
- Not magic—but some days it gets suspiciously close

# Main Types of 3D Printing

- FDM/FFF: melts plastic filament through a hot nozzle (Fused Deposition Modeling / Fused Filament Fabrication)
  - Resin: cures liquid resin with UV light for fine detail
  - Industrial: SLS and metal systems for advanced applications
  - Most beginners start with FDM
- 

# What It Takes to Get Started

- A 3D printer and filament or resin. My printer is a Creality Ender-3 V3 SE - \$200 CA
- Computer or tablet with slicing software. I use the free OrcaSlicer program
- Digital 3D models and basic tools
- Safe workspace and patience—the underrated accessory

# Choosing a Beginner Printer

- Reliable auto bed leveling
- Easy filament loading and simple software
- Good community support and available replacement parts
- Avoid buying only for size, speed, low price, or mystery features

# Basic Materials

- PLA: easiest beginner material
- PETG: stronger and more heat-resistant
- ABS/ASA: strong, but needs ventilation and often an enclosure
- TPU: flexible; useful but trickier
- Resin: high detail, plus gloves, cleanup, curing, and ventilation

# The 3D Printing Workflow

- Find or design a model
- Slice it with the right settings
- Send the file to the printer
- Print, remove, clean up, test, and adjust

# Finding Things to Print

- Model sources: Thingiverse, Printables, MakerWorld,
- Look for good photos, reviews, makes, and recent comments
- Check file format and suggested printer settings
- Beginner rule: proven models save headaches

Easter Rabbit

Custom bobbin for vintage spinning wheel

Articulated Dragon

# How to Make Something Yourself

- Decide what problem you are solving
- Measure, sketch, model in CAD, and export STL/3MF
- Print a test version, measure, adjust, and reprint
- Great first designs: wall hook, cable clip, drawer organizer, custom knob

# Beginner Design Software

- Tinkercad: easiest starting point
  - Fusion 360: powerful for mechanical parts
  - FreeCAD: free and open-source
  - Onshape: browser-based structured CAD
  - Blender: artistic shapes and sculpture
- 

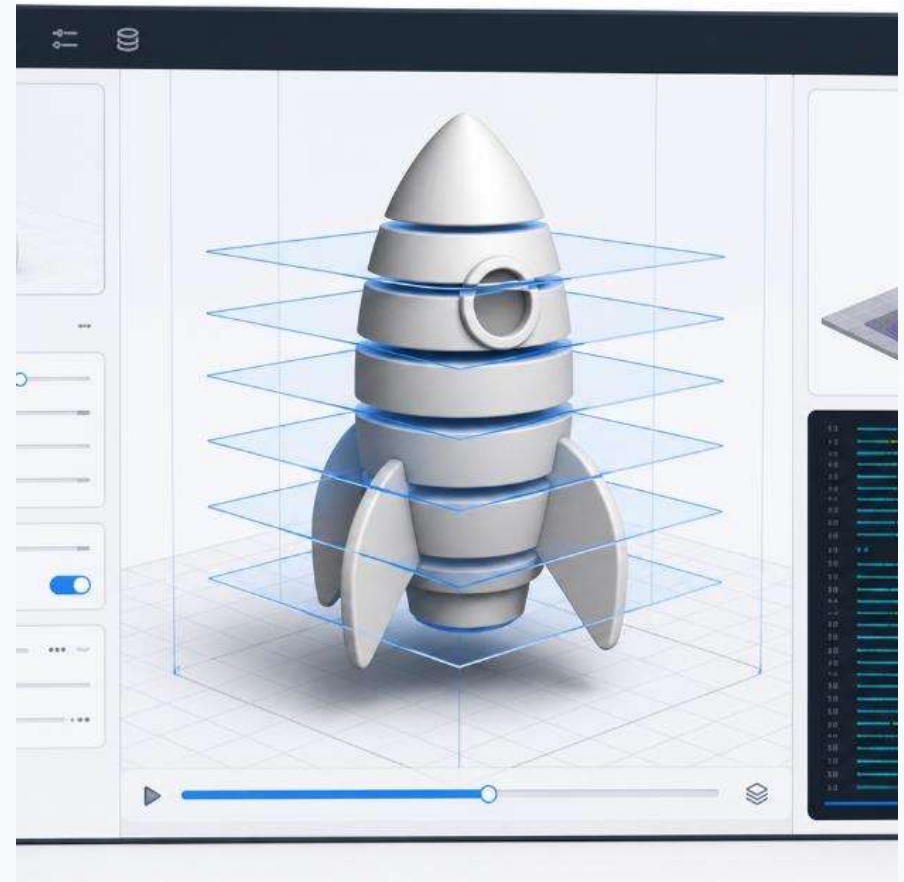

# What You Need to Learn

- Printer basics, leveling, and calibration
- How filament behaves
- Slicer settings, supports, and orientation
- Common print problems and maintenance
- Basic measuring with calipers and simple CAD edits

# Slicer Basics

- A slicer converts a model into printer instructions; I use the free OrcaSlicer program
- Common settings: layer height, infill, walls, temperature, speed, supports
- Start with standard profiles before tweaking everything
- Let the printer company earn its keep first

# Important Printing Terms

- STL/3MF: common model file formats
- G-code: printer instruction file
- Layer height: thickness of each layer
- Infill: internal structure
- Supports: temporary structures for overhangs
- Build plate, nozzle, extruder, and bed adhesion

# Orientation and Supports

- Part orientation affects strength, finish, and print time
- Overhangs may need supports
- Flat surfaces usually print easier
- Tall skinny parts can wobble
- The best orientation is often a compromise

# Print Quality Basics

- Dry material, correct temperature, clean build plate, and proper leveling matter
- Reasonable speed and cooling improve results
- Common issues: warping, stringing, layer shifting, poor adhesion, under-extrusion, blobs

# Safety Basics

- Use a stable surface and respect hot nozzles and beds
- Ventilate, especially with ABS/ASA
- Avoid leaving printers unattended until you understand what you're doing

# Basic Tools and Accessories

- Digital calipers, scraper, flush cutters, pliers
  - Deburring tool or hobby knife
  - Isopropyl alcohol and small brushes
  - Filament storage bags or dry box
  - Spare nozzles and bed adhesive if needed
- 

# First Projects to Try

---

- Calibration cube and Benchy boat
  - Cable clips, keychains, phone stand, wall hook
  - Drawer divider, simple bracket, knob, handle, storage tray
  - Avoid huge prints, delicate miniatures, moving assemblies, TPU, and high-temp materials at first
- 

# How to Improve Over Time

- Print existing models first
- Learn slicer settings gradually
- Make small adjustments and track what changed
- Learn basic CAD and design simple parts
- Failed prints are tuition—often paid in plastic spaghetti

# Common Beginner Mistakes

- Changing too many settings at once
- Printing too fast or skipping bed cleaning
- Using wet filament
- Buying difficult materials too soon
- Ignoring measurement and plastic shrink/flex
- Expecting perfection on the first try

# Example Project: Cable Holder

- Problem: messy charging cables
- Measure cable diameter and sketch a holder
- Design in Tinkercad or CAD, then export STL/3MF
- Slice with a PLA profile, print, test fit, adjust, and reprint

# What Success Looks Like

---

- You understand the basic workflow
  - You can print simple models reliably
  - You can fix basic problems
  - You learn one design tool
  - You build confidence through repetition
- 

# Resources for Learning

- Printer manufacturer tutorials
  - YouTube beginner channels
  - Reddit communities and 3D printing forums
  - Printables and MakerWorld model pages
  - Local maker spaces such as libraries
- 

# Start Simple. Learn Slowly. Print Often.

3D printing combines design, machine setup, materials, and problem-solving

Once the basics click, useful objects can come straight from your own ideas

That is still one of the coolest tricks a home machine can do
